## 3-D Figures and Changing Dimensions

$\left.\begin{array}{|l|l|}\hline \text { Grade Level } & \text { Eighth Grade } \\ \hline \text { Subject } & \text { Mathematics } \\ \hline \text { Curriculum Objective } & \begin{array}{l}\text { 2.01 Determine the effect on perimeter, area, or volume when one or } \\ \text { more dimensions of 2-D and 3-D figures are changed. } \\ \text { 3.01 Represent problem situations with geometric models. }\end{array} \\ \hline \text { Guiding Question } & \begin{array}{l}\text { How is the volume and surface area affected by a change in the } \\ \text { dimensions of a 3-D figure? }\end{array} \\ \hline \text { Lesson Summary } & \begin{array}{l}\text { Students will understand how changing one, two, or three dimensions } \\ \text { affect the volume of a three-dimensional figure. }\end{array} \\ \hline \text { Activating Strategy } & \begin{array}{l}\text { 1. Group students into pairs. } \\ \text { 2. Inform students that they will each be talking about topic area and } \\ \text { volume for two minutes. They will need to select which student will } \\ \text { begin first. An easy way to do this is to say something like: "Find } \\ \text { out whose birthday comes first in a calendar year." Then tell } \\ \text { students that, "That person gets to go second!" }\end{array} \\ \hline \text { Cognitive Strategy } & \begin{array}{l}\text { 3. Using a stop watch or other timing device, tell students to begin } \\ \text { talking. } \\ \text { 2. At two minutes, instruct students to switch. At this point, the other } \\ \text { partner begins talking. It is okay for the second person to repeat } \\ \text { some of the things the first person said. However, they are } \\ \text { encouraged to try and think of new information to share. }\end{array} \\ \text { 3. After choosing a pool type, the students will determine the effects how to double one, two, or three dimensions of } \\ \text { of shortening the length and width by half and lengthening the sides } \\ \text { by three halves. }\end{array}\right\}$

|  | 6. Have the students save and print the Excel document. <br> Summarizing Strategy |
| :--- | :--- |
| 1. Prior to using the Exit Slip as a summary activity in your classroom, <br> decide upon its purpose (including whether or not it will be used as <br> an assessment or evaluation tool). <br> 2.During the last 5-10 minutes of class, inform students that they need <br> to answer the question, "What happens when you double one <br> dimension, two dimensions, and three dimensions of a 3D figure?" <br> on their Exit Slip. <br> 3ell students to take out a half-sheet of paper and answer the Exit <br> Slip question. <br> 4. As students exit your classroom that day, collect their Exit Slips as <br> a pass out the door. |  |
| Evaluation | You will have both the Excel document and the Exit Slips as an <br> assessment tool. |
